**Objective:**

The main objective is to use HTML, CSS and JavaScript to build a Fundraiser Meter component. You are allowed to use 3rd party libraries if needed.

Wireframe:

Requirements:

- Implement HTML structure of the wireframe above.

- The component has to be vertically and horizontally centered on the web page.

- On page load, the progress bar should be animated from zero to its current value.

- Add three buttons to donate values of "£1", "£5", "£10".

- When the value changes, all the UI has to update accordingly

Bonus (optional):

Turn the wireframe into a visually stunning component. You can be as creative as you need i.e. applying modern design styles like Flat Design, CSS animations, etc...
